

Manuscripts should be formatted as detailed below at the point of acceptance. Manuscripts do not need to be formatted at submission or during revision.

The title should summarize the key findings in a single statement of 15 words or fewer

Firstname I. Surname¹, Firstname I. Surname^{1,2*}

[The author list must match that provided on our manuscript tracking system]

¹ Full postal address of first affiliation, including institution, city and country.

² Full postal address of second affiliation, including institution, city and country.

**At least one corresponding author must be designated. An e-mail address must be provided for each corresponding author. For each corresponding author, and for any author who wishes for their ORCID to be included in the final article, [an ORCID should be included in their author profile](#) in our manuscript tracking system prior to formal acceptance.*

Author tagging statements are limited to the following two options: "These authors contributed equally" and "These authors jointly supervised this work", with no more than one of each tag permitted.

Abstract (mandatory)

- Should be 150 words or fewer.
- Should be accessible to non-specialists.
- Should include the background and context of the work, then 'Here we show' or an equivalent phrase, and then the major results and conclusions of the paper.
- Hyperbolic language (e.g. novel, unprecedented, remarkable, etc.) should be avoided.
- Acronyms should be avoided wherever possible.
- Must not contain citations to references.
- Any key species, protein names, and gene names should be mentioned in the title and/or abstract to ensure optimal retrieval of the paper in database searches.

Introduction (mandatory)

- Must begin with the heading 'Introduction'.
- Should include the background and rationale for the work.
- The final paragraph should be a brief summary of the major results and conclusions.

Language and style, applicable throughout manuscript

- Text must not be copied directly from published work (even your own) without clear attribution, including one or more references.
- Language such as "new", "novel", "for the first time", "unprecedented", etc, should be avoided because it often leads to unproductive controversy. Novelty should be clear from the context.
- Acronyms should be defined upon first use.
- The names of biological species should be italicized.
- Only official gene/protein names should be used. Genes and RNA should be italicized. Proteins should not.
- Mathematical terms should conform to the following guidelines:
 - Scalar variables (e.g. x , V , χ) should be typeset in italics.
 - Multi-letter variables should be formatted in Roman.
 - Constants (e.g. $\hbar$, G , c) should be typeset in italics (the only exceptions being e , i , π , which should be typeset in Roman) and vectors (such as r , the wavevector k , or the magnetic field vector B) should be typeset in bold without italics.
 - In contrast, subscripts and superscripts should only be italicised if they too are variables or constants. Those that are labels (such as the 'c' in the critical temperature, T_c , the 'F' in the Fermi energy, E_F , or the 'crit' in the critical current, I_{crit}) should be typeset in Roman.
 - To avoid doubt, unit dimensions should be expressed using negative integers (e.g. $\text{kg m}^{-1} \text{s}^{-2}$, not kg/ms^2) or the word 'per'.

Results (mandatory) or Results and Discussion

- Must begin with the heading 'Results', or 'Results and Discussion' if the two are fully integrated.
- We recommend splitting the Results/Results and Discussion section into sub-headed sections.
- If personal communication from anyone outside of the author list is cited, written permission must be provided.
- All data that support the conclusions drawn must be presented in the manuscript unless they are published elsewhere. We do not allow statements of "data not shown".
- Equations must be supplied in an editable format, and not as images.
- Supplementary items should be cited in a consistent format throughout the manuscript, and in line with the labels used in the Supplementary Information. We recommend using the following formats: Supplementary Figure 1, Supplementary Table 1, Supplementary Methods, Supplementary Note 1, Supplementary Discussion, Supplementary References, Supplementary Movie 1, Supplementary Audio 1, Supplementary Data 1 and Supplementary Software 1.
- All Supplementary items in the Supplementary Information PDF should be cited in the main manuscript. General citations to the Supplementary Information (e.g. "see Supplementary Information") should be avoided.
- All Supplementary files (Supplementary Movies, Supplementary Audio, Supplementary Data and Supplementary Software) must be cited in the main manuscript file.

Display items

- We recommend a maximum of 5 display items (figures and tables) for ~2500 words and 10 display items for ~5000 words.
- When choosing a colour scheme please consider how it will display to users with colour blindness. Please consider distinguishing data series using line patterns rather than colours, or using optimised colour palettes such as those found at <https://doi.org/10.1038/nmeth.1618>.

Figure 1. Figures must have a brief title that describes the Figure as a whole and does not contain reference to specific figure panels. Figure captions must also have a legend that defines each Figure panel individually. Readers should be able to understand the Figure without reference to the main text or other figures. Abbreviations, symbols, colours and shading must be defined, even if they have been defined before in the text, **a)** Microscopy images and photographs must be accompanied by scale bars, which must be defined. **b)** Molecular weight markers should accompany all gels/blots. **c)** Where error bars are used, they must be defined. Bar and line graphs must depict all data points to properly show data distribution. Alternatively, bar graphs may be converted to box-and-whisker plots. Axis and panel labels will be published as received; we recommend using a sans-serif font such as Arial or Helvetica and ensuring that the size of the labels is large enough to be visible at 100% zoom, and consistent across panels within the same figure, and across figures.

- Figures, Schemes and Tables must be cited, in numerical order, in the text. Tables must be provided in word-editable format (Word/TeX/Excel/csv), unless scientifically meaningful colours or shading are present, in which case they will be published as a flattened image.
- Tables must have a caption. Abbreviations and symbols/variables listed in Tables must be defined in a caption.
- Data in Tables must be free from bold/italic formatting unless this has been clearly defined in the footnote.
- Where Tables contain images, each image must appear in its own cell in the absence of any text.

Discussion (optional)

- The discussion should consist of an extended analysis of the results and their comparison to the literature rather than a short summary or conclusion.

Methods (mandatory, unless purely theoretical work)

- The Methods and Supplementary Methods must together include sufficient detail such that the work could be reproduced. The methods section should not contain excessive use of phrases such as "as described previously".
- It is preferable that all key methods be included in the main manuscript, rather than in the Supplementary Information.
- Where it would benefit readability, we recommend splitting the methods section into sub-headed sections.
- When the study involves live vertebrates, a statement affirming that you have complied with all relevant ethical regulations for animal testing and research is necessary. A statement explicitly confirming if the study received ethical approval, including the name of the board and institution that approved the study protocol is also required. The species, strain, sex and age of animals should be included.
- Where human participants are involved, confirmation that all relevant ethical regulations were followed is needed, and that informed consent was obtained. This must be stated in the Methods section, including the name of the board and institution that approved the study protocol.
- Please ensure that you have included any oligo sequences, sources and concentration of antibodies and sources of all cell lines, if applicable.
- If the work involves any cancer cell lines that are listed in the database of commonly misidentified cell lines, ICLAC (<http://iclac.org/databases/cross-contaminations>), please provide justification for their use in the methods section. Please also state from where the lines were obtained; whether they were tested for mycoplasma contamination; and whether they were authenticated, and if so, by which method.
- Please use the Nature templates for [NMR](#), [cryo-EM](#), and [X-ray](#) refinement statistics for newly reported macromolecular structures (see <https://www.nature.com/commsbio/submit/submission-guidelines#characterisation>).
- The Methods should include a separate section titled "Statistics and Reproducibility" with general information on how the statistical analyses of the data were conducted, and general information on the reproducibility of experiments, including the sample sizes and number of replicates and how replicates were defined.
- A full guide to our policies can found here <https://www.nature.com/nature-research/editorial-policies>

Data availability (mandatory)

- For a list of example data availability statements, please see <http://www.nature.com/authors/policies/data/data-availability-statements-data-citations.pdf>
- For novel protein structures, a stereo image of a portion of the electron density map (including contour level and type of map) must be provided for crystallographic structures, or the superimposed lowest energy structures (>10) for NMR structures. Structural data must be deposited in the relevant publicly accessible database, and accession codes must be provided in the data availability section.
- Authors should cite any datasets stored in external repositories that are mentioned within their manuscript. For previously published datasets, we ask authors to cite both the related research articles and the datasets themselves. For more information on how to cite datasets in submitted manuscripts, please see our submission guidelines.

Code availability (mandatory for articles with new custom code)

- For all studies developing new software or using custom code that is deemed central to the conclusions, a statement must be included indicating whether and how the code can be accessed, including any restrictions to access. This section should also include information on the versions of any software used, if relevant, and any specific variables or parameters used to generate, test, or process the current dataset.
- Please see our policy on code availability for more information. <http://www.nature.com/sdata/for-authors/editorial-and-publishing-policies#code-avail>

References (mandatory)

1. References must be listed by number and should be given in the order of appearance in the text, then Tables, Figures and finally Boxes
2. Each reference should contain only one item; compound references will be separated.

3. Manuscript citations must include journal title; article title; volume number; start and end page or article number or DOI; and year of publication.
4. No publication can be present more than once in the reference list.
5. No footnotes are permitted in the references or elsewhere. Text must instead be incorporated into the main text, the Methods section, or the Supplementary Information.
6. Any in-text citations to references (e.g. "Gupta et al. show...") should be followed by their corresponding reference citation number from the reference list.
7. Where possible, preprints in the reference list should be updated with details of the published, peer-reviewed paper.
8. Only articles that have been published or accepted by a named publication or recognised preprint server can be listed in the References. Other persistent and recognised sources such as books and monographs are also permitted. Websites should only be cited if they are in common use or curated.

Acknowledgements (optional)

- Acknowledgements must be relevant, appropriate and kept to a minimum.
- Funding information should be included in the Acknowledgements. No separate funding section is permitted.

Author contributions (mandatory)

- An author contributions statement that individually lists the specific contributions of each author to the work must be provided.
- All authors must be referred to by name or initials in this statement.
- All authors must be clearly disambiguated from one another.

Competing interests (mandatory)

- If no competing interests exist, the statement 'the authors declare no competing interests' should be given.
- All authors must be accounted for within the statement, e.g. with use of 'all other authors declare no competing interests' where relevant.
- For patents, full details including patent name, number, authors, and geographical region should be provided.

Supplementary information

- The Supplementary Information must be provided as a single separate file in PDF format. Supplementary Figures must not be provided separately and should instead be provided within the PDF. Extended data items are not permitted and must be placed in the Supplementary Information instead.
- We do not edit Supplementary Information files; they will be uploaded with the published article as they are submitted with the final version of your manuscript. Any tracked changes should be removed from the file.
- Any information provided on the cover/title page of the Supplementary Information must match the title and author list in the main manuscript.
- We recommend labelling and citing Supplementary items using the following formats: Supplementary Figure 1, Supplementary Table 1, Supplementary Methods, Supplementary Note 1, Supplementary Discussion, and Supplementary References.
- All Supplementary text should be included under a citeable section heading, and all sections must be cited in the main manuscript file. We recommend including text under a Supplementary Methods, Supplementary Note, or Supplementary Discussion heading.
- All Supplementary items should be cited in the main manuscript, and can be cited in blocks, e.g. "for NMR spectra see Supplementary Figures XX-YY"
- Each Supplementary Figure requires a caption. These should be presented below the Figure and should refer to all panels.
- Error bars in Supplementary Figures should be defined.
- Mathematical terms or formulae should be formatted correctly in the Supplementary Information (see language & style subsection above).
- Where portions of blots and gels have been presented in the main paper, the uncropped blots/gels should be included in the Supplementary Information file.
- Where data are presented in Supplementary Information, large datasets should be supplied as Supplementary Data files, whereas smaller Tables should be supplied as Supplementary Tables.

- Supplementary References should appear at the end of the Supplementary Information file, and should be self-contained and numbered from 1. References mentioned in both the main text and the Supplementary Information must be part of both reference lists so that the Supplementary Information does not refer to the reference list in the main paper and vice versa.
- Where Supplementary Movie/Audio/Data/Software files are provided, each file should be labelled as Supplementary Movie/Audio/Data/Software 1, etc., and legends for these should be given in the cover letter or Editorial Requests Table (not in the Supplementary Information file).
- All Supplementary Movie/Audio/Data/Software files must be individually cited in the main manuscript.
- We recommend limiting the size of each Supplementary file to 50MB.
